To Whom It May Concern,

October 21, 2021

My passion for cybersecurity started with Rapid7.

A year into my IT career as desktop support, my manager introduced me to an incredibly handy tool that our university used to scan our network: Rapid7's InsightVM. I already loved the job, but the day I was given the green light to run as many scans as I saw fit was the day I started staying up late to do security analysis and research CVE remediation. Shortly after, I was approved to apply OU-wide fixes to our biggest CVE's with Group Policy and PowerShell, and I was hooked on cybersecurity.

Since then, I studied and received my Security+ certification and my love for the field keeps growing. It would be an honor to work alongside the team that started me down this path, and I eagerly look forward to hearing how I can help make Rapid7 more secure.
